

Junior Front-End Developer (AngularJS)

Full-time • Hybrid (New York, NY) • Early-career (0–2 years)

About Orion Global Systems

Orion Global Systems is a Fortune 500 technology and consulting company helping enterprises in more than 40 countries modernize their digital experiences. Our front-end platforms serve millions of users daily across finance, healthcare, and retail.

We are expanding our centralized UI engineering team and are looking for a junior front-end developer eager to grow their skills in a large-scale, corporate environment.

Digital Experience Engineering

Tech Stack Focus

AngularJS, REST APIs

Role Overview

As a Junior Front-End Developer, you will work within a cross-functional team to build and maintain front-end features for internal and client-facing web applications built on AngularJS. You'll collaborate with senior engineers, designers, and product managers while learning best practices for front-end development in an enterprise setting.

What You'll Do

- Implement UI components and pages using AngularJS, HTML, and CSS based on design specifications.
- Work with senior developers to integrate front-end components with RESTful APIs.
- Fix bugs, perform code cleanup, and help refactor legacy AngularJS code under guidance.
- Write clear, maintainable JavaScript following team style guidelines and coding standards.

- Participate in code reviews, sprint planning, and daily stand-up meetings.
- Assist in creating and updating user-facing documentation and component usage guidelines.
- Collaborate with QA engineers to reproduce issues and test new features.

What We're Looking For

- Some programming background (academic projects, internships, bootcamps, or personal projects).
- Basic understanding of core web technologies: HTML5, CSS3, and JavaScript.
- Familiarity with at least one front-end framework; exposure to AngularJS is a strong plus.
- Ability to read and reason about existing code and make small enhancements safely.
- Foundational knowledge of version control (Git) and working in a collaborative environment.
- Curiosity to learn enterprise-scale front-end patterns and best practices.
- Clear communication skills and willingness to ask questions when unsure.

Nice to Have

- Side projects or coursework using AngularJS or a similar framework (Angular, React, Vue).
- Basic understanding of responsive design and cross-browser compatibility.
- Experience consuming REST APIs from the front end.
- Exposure to task runners or build tools (npm scripts, Webpack, or similar).

Why Join Our Team

- Structured onboarding and mentorship from experienced front-end engineers.
- Clear growth path from junior to mid-level roles within 18–24 months for strong performers.
- Opportunity to work on high-traffic, production-grade applications used globally.
- Competitive salary, annual bonus eligibility, and comprehensive benefits package.
- Hybrid work model with 2–3 days per week in our New York office.

How to Apply

Please submit your resume and a short note about your programming experience (projects, coursework, or internships). If available, include links to your GitHub profile or any live demos of your work.
