Junior C# Developer

Northbridge Solutions · Mid-size Product Company

Hybrid · Austin, TX (2–3 days on-site)   Full-time   New Product Development Team

Mentored / Early Career

About Northbridge Solutions

Northbridge Solutions is a mid-size software company (≈180 employees) focused on building modern B2B platforms for operations and analytics. We are kicking off a greenfield product in 2025 and are expanding our engineering team with a motivated Junior C# Developer who wants to learn, grow, and ship real features.

You will join a cross-functional team of senior engineers, a product manager, and a UX designer working collaboratively to build our next-generation SaaS application from the ground up.

The Role

As a Junior C# Developer, you will work closely with experienced developers who will provide mentorship and code reviews while you:

- Implement new backend features in C# as part of a modern web application.
- Write and maintain SQL queries, stored procedures, and data access code.
- Use an ORM such as **Entity Framework** or **Dapper** to work with relational data.
- Contribute to RESTful APIs consumed by our web front-end.
- Participate in code reviews, backlog grooming, and sprint planning.
- Write basic unit/integration tests and help debug production issues with guidance.

This role is ideal for someone with foundational C# knowledge (academic, bootcamp, or 0–2 years industry experience) who wants to learn best practices and work on a new, evolving product.

What You'll Work With

CORE TECHNOLOGIES

- C# and .NET (Core / 6+)
- ASP.NET Core Web API
- SQL Server
- Entity Framework Core and/or Dapper

NICE TO HAVE

- Basic understanding of HTML, CSS, JavaScript or TypeScript
- Familiarity with a front-end framework (e.g., React, Angular, Vue)
- Exposure to Git and branching workflows
- Understanding of REST APIs and JSON

WAYS OF WORKING

- Agile / Scrum process (2-week sprints)
- Pair programming and structured mentorship
- Code reviews and knowledge-sharing sessions
- CI/CD pipelines (Azure DevOps or similar)

What We're Looking For

- 0–2 years of professional experience, or equivalent personal/academic projects in C#.
- Solid understanding of object-oriented programming concepts.
- Basic experience writing SQL (SELECT, JOIN, WHERE, GROUP BY) against a relational database.
- Any exposure to ORMs such as **Entity Framework** or **Dapper** is a strong plus.
- Comfort working in Visual Studio or Visual Studio Code.
- Familiarity with source control (Git, GitHub/Azure DevOps/Bitbucket).
- Ability to break problems into smaller tasks and ask clear questions when blocked.
- Good communication skills and a desire to collaborate with a team.
- Eligibility to work in the United States (we are not able to sponsor visas for this role).

Nice-to-Have Experience

- Academic or side projects involving ASP.NET Core web APIs or MVC.
- Practice with unit testing frameworks (xUnit, NUnit, or MSTest).
- Basic understanding of design patterns or clean architecture concepts.

- Experience working with cloud platforms (Azure, AWS, or GCP).

- Exposure to logging and monitoring tools (e.g., Serilog, Application Insights).

What We Offer

- Competitive salary for a junior role and annual performance-based reviews.

- Hybrid work model with flexible hours and a modern downtown Austin office.

- Structured mentorship from senior engineers and a personal development plan.

- Budget for courses, certifications, and conferences.

- Comprehensive health, dental, and vision benefits, plus 401(k) with match.

- Generous PTO and company holidays.

How to Apply

Please send your resume and a short note about why you're interested in this role. If available, include links to any GitHub repositories or projects showcasing your C# or SQL work.
